

Dear colleague we are pleased to invite you to join the next the Menton 5th International Workshop on PET in lymphoma that will be held on September 19th-20th 2014. The preliminary program which is still subject to change is in attached file. The plenary sessions will start on September 19th.

As you remember last time we met we decided to alternate the Lugano and Menton congresses: in the odd years Lugano in the even years Menton meetings will be planned. This is not only to allow interested people to attend both meetings but also to link the discussion revolving around arguments that should be considered by the nuclear medicine and the clinical point of view. This year we have dedicated a session on PET on other imaging techniques as a biomarker and we will focus on metabolic volume measurements and on the use of different imaging modalities for end-therapy tumor response. We have also dedicated a session on PET in paediatric lymphoma. As usual the posters exhibition will be in the main Hall and a summing up will be presented in plenary for all the abstracts with discussion of the 3-4 best ones. The presentation of the results of PET based trials is encouraged and the various cooperative groups in the world are welcome to participate in the dedicated Saturday afternoon session. The outcome of the meeting depends largely on the ease of communicating and on the friendly atmosphere among attendees. Therefore we expect your presence to duplicate the success of the previous editions.

The deadline for abstract submission has been set on May 5th. The registration will be from February to July 2014

Loking forward to seeing you in Menton for this end of summer meeting.

Best regards
